

Welcome to our Spring Newsletter 2022!

The IPCC's sixth assessment report into Climate Change is an urgent call to action. We have a very small window of time to make the changes needed to avert the worst-case scenario. At Geo Green Power we're determined to keep playing our part.

We have successfully navigated through the last 18 months, growing our team and increasing our sales, and we're on track to install more renewable energy systems in 2022 than ever before!

5* Trustpilot review for Geo Green Power!

A fantastic service all-round - highly recommended.

"We had ground source heat pumps fitted by Geo Green Power (GGP) this year.

"The installation was handled with great care, consideration and professionalism by the team, led by Rob. It was a delight to have them here.

"Our confidence in the job on the ground source heat pumps meant we decided to only speak to GGP for the next part of our installation, solar panels. Again, every aspect of the job was great.

"A first-class team did the installation, the panels are great and excellent quality and - even in winter - they have made a difference.

"GGP have also sorted EV charging points for us, and we've received another 5 star service working with Rohith.

"It's clear that everyone we have met really enjoys their role at GGP, and that reflects in the service and professionalism you get across all aspects of the business.

"We'd highly recommend them."

We started 2022 completing this amazing 500kW system in Downham Market for Waldersey Farms Ltd. A significant installation that is now saving around 140 tonnes of CO2 a year!

A 26kW ground-mounted solar PV array and three Tesla PowerWall batteries have boosted this period property's environmental credentials, in addition to a 59kW ground source heat pump we installed in 2021.

This 292kW solar PV system is generating over 270,000kWh of electricity at Adrian Scripps Ltd, one of the UK's premier growers and packers of English fruit. This beautiful system will save 90 tonnes of CO2 every 12 months.

Meet the Team!

Our Geo Green team continues to go from strength to strength and we have more new faces to introduce to you!

Damian Hanus

New Solar PV Installer, Damian, joined Geo Green Power in December working with our commercial and domestic installation teams installing both roof mounted and ground mounted systems. Before deciding to work in the renewable energy industry Damian has had a variety of roles working as a car mechanic, both in the workshop and with the office management team, and he's also earned a level 3 qualification in Carpentry and Joinery.

Damian has a keen interest in cars and outside of work he likes to spend his free time playing "Virtual Sim Racing" on his computer and of course, looking after his other half (the most important!).

Siobhan Tate

Siobhan joined Geo Green Power in November 2021 as our Sales & Marketing Administrator, her role includes producing quotes, inputting new sales leads and directing enquiries, so if you call the office, it's likely Siobhan will answer!

Having gained various Business Admin and IT qualifications, Siobhan took a break from office life to work in children's daycare and although she loved it, she decided to head back to the office and join us at Geo Green Power.

In her spare time Siobhan enjoys spending time with her family (generally being a taxi service), walks with her dog, listening to music, meeting up with friends and she loves going to concerts!

Isaac Ghent

Meet Isaac, one of our newest electricians who joined Geo Green Power last August! Before working in the renewable energy industry, Isaac managed a COVID test site leading a team of over 20 people. He also entered an apprenticeship scheme working on commercial industrial installs and has years of experience inspecting and testing electrical work.

Eager to learn more about renewable energy, Isaac now works on our solar PV and heat pump installations. Outside of work he enjoys rock climbing, playing bass guitar, hiking, and travelling around the world, visiting countries such as Mexico and Israel to name a few.

New Arrivals!!

It's been an electric start to the new year for our senior electricians!

A huge congratulations to Craig and Natalie who have recently welcomed their baby boy Hugo; and Pauric and Ellie who have brought their new baby girl, Nuala, into the world!

Geo Green Power

Geo Green Power United

On 26th March 2022, our renewable energy team tested their teamwork and football skills by taking part in a 5-a-side tournament at Business Fives Nottingham! This was the first time we've played together competing against other businesses and we successfully made it to the semi-finals!

One of the main purposes of this event is to raise money for a charity of our choice. Given the current, and devastating situation in Ukraine, we've chosen British Red Cross who are helping to get vital supplies to people in desperate need of help.

We've currently raised £500 and our Just Giving page will be open for further donations until 30th April. If you are able to, please donate at: <https://bit.ly/GGPBRUCUkraine>

Award Finals for GeoPura

GeoPura has been shortlisted for the "Product Innovation of the Year" award at the Edie Sustainability Leaders Awards 2022!

The entry focuses on their Hydrogen Power Units (HPUs) and their achievements in replacing diesel generators.

We're incredibly proud that they are nominated in this category and are taking part in an event with some of the most well-established companies within the UK!
