Moto Hospitality drive down carbon costs

Solar panels have been installed on 15 sites for Moto Hospitality

Why Moto chose solar

National motorway service station operators, Moto Hospitality, set ambitious targets to reduce their carbon footprint and energy costs, with renewable energy playing a key role.

Improving the business's sustainability was a huge goal for Moto. They have actively promoted sustainable travel by investing in EV charging stations, most recently hitting a milestone of installing 1,000 charging sites across their service station network and generating energy onsite to access additional capacity beyond the grid. To take them even closer to carbon neutrality, Moto began seeking solar panels and installation companies via a competitive tendering process.

Working with us

Geo Green Power won the initial installation job for Moto through a tender involving 12 other companies, and the installation work began soon after. As work progressed two further sites were added to our schedule. The 15 systems, ranging in size from 35kWp to over 400kWp, will deliver an estimated output of 1,371MWh per annum and we are

Solar System Size: 1,614kWp

Annual CO2 Saving: 342 Tonnes

Equivalent Cars Off The Road: 68

"At Moto, we recognise the critical role we play in driving the UK towards a more environmentally friendly and net zero future. A key element of this is helping the motorway network embrace green energy and renewable solutions. That's why we chose Geo Green Power - a knowledgeable and trusted expert in the field - to carry out this solar installation across 15 of our sites."

Moto

Jess Lockwood, Property Director

providing a 5-year maintenance contract as part of the deal.

The solar panel systems have been installed at Winchester North, Wetherby, Grantham, Pease Pottage, Donnington Park, Stirling, Trowell, Woolley Edge Southbound, Thurrock, Southwaite, Woolley Edge Northbound, Cherwell Valley, Exeter, Sawtry and Rugby – which has the largest install of 402kWp. Property Director at Moto, Jess Lockwood, stated that: “We’re excited to see the positive impact these systems will have.”

James Cunningham, Managing Director of Geo Green Power, added: “We’re delighted to be working with Moto Hospitality on their journey to net zero. Our mission extends beyond just helping Moto reduce their emissions; we aim to inspire other businesses to evaluate their environmental footprint and adopt sustainable practices to create a greener future for everyone.”

The results so far

Each solar installation by Geo Green Power is having an immediate impact on emissions, delivering a total reduction of 342 tonnes of CO2 annually - which is the equivalent to taking 68 petrol cars off the road permanently.
